ScanRx → DisplayRx™

NO MORE GUESSING FOR THEM.
NO MORE INTERRUPTIONS FOR YOU!

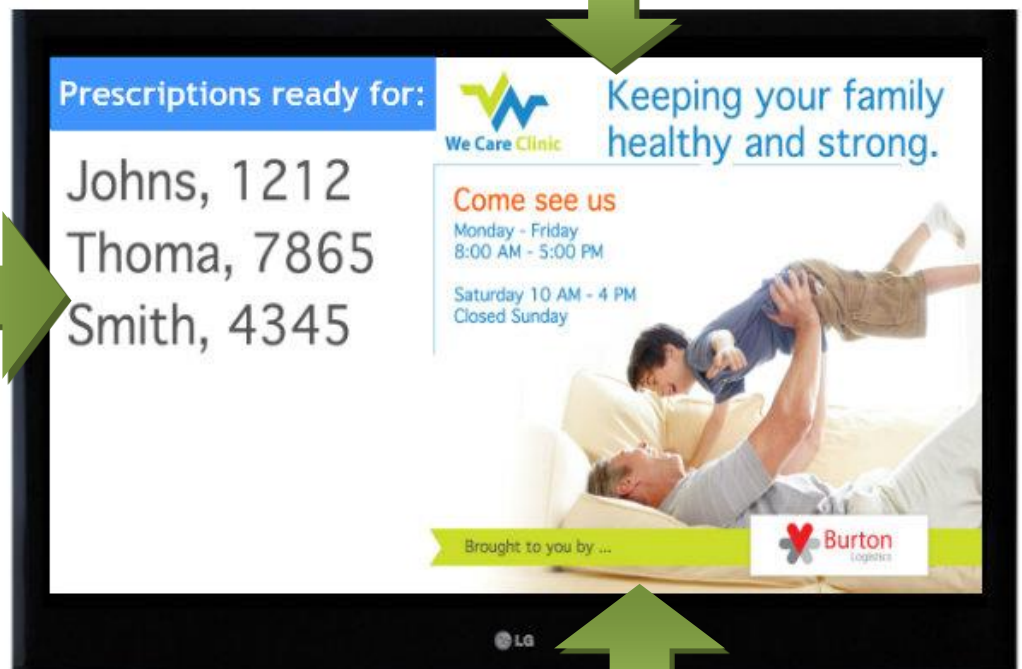

1. Scan a prescription for pick up, and the name/number combination is displayed on the screen outside the pickup window.
2. The names automatically cancel out and drop off the screen according to a time set in the software.
3. You control how many names can go up per screen, for how long and in what combination. Simply scan an Rx and DisplayRx™.

- ✓ **Easily notify patients**
- ✓ **Create a High-End Atmosphere**
- ✓ **Increase Patient Satisfaction**

Completely customizable, allowing the screen to fit YOUR facility's needs.

Patient Information can be privately identified.

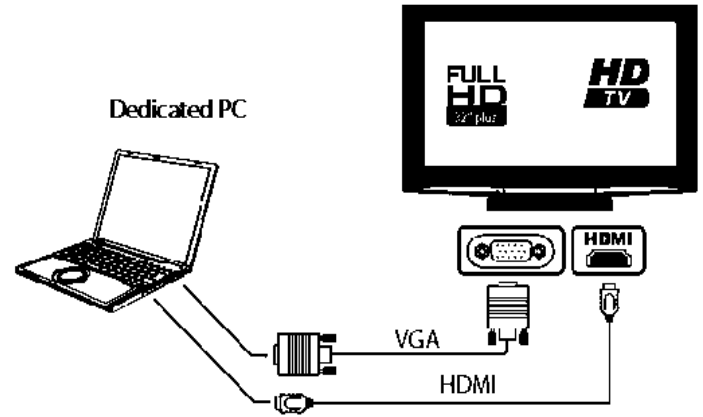

Our Split Screen Technology easily displays ads, pictures, web pages, mp3's or video.

Hardware Requirements

Recommended Hardware

1. Dedicated PC with Windows Xp, Vista, or Windows 7/ 8
2. Min 32" HD TV monitor and cable hardware
3. Internet connection
4. Your Prescription Scanner

Using remote desktop, we are able to install and configure your system, as well as train your staff, without ever stepping foot into your facility. The entire process is completed and fully supported within 3-5 days.

DisplayRx™ is built using the Microsoft® .NET architecture and designed to operate on computers running a Microsoft operating system. For picture quality purposes, a min. 32" HD Flat screen is recommended. A stand-alone PC should be used to operate the DisplayRx™ software to avoid inadvertently displaying inappropriate information. A separate scanner is NOT necessary - prescriptions are scanned in with your current scanner.

DisplayRx™ Interfaces with Key Vendors in the Market

- DisplayRx™ interfaces with 7 top vendors
- We provide an alternative solution if your pharmacy management if your vendor is not supported
- We are always working with new vendors to provide you with the best service possible

updates and upgrades.

MAKE THE MOST OF YOUR INVESTMENT

Annual Maintenance & Support

- ✓ Access to the latest version as well as ongoing updates, enhancements, and new capabilities
- ✓ Quality technical support & patient service
- ✓ Remote assistance for demo, installation, product configuration, product upgrade & technical support

FAQ

How long has DisplayRx™ been established and how many pharmacies/clinics does it serve?

Suncrest Software Solutions has been helping pharmacies for over eight years. DisplayRx™ was introduced in the Suncrest pharmacy line in 2012 and is now serving many pharmacies across the United States and Puerto Rico.

Who controls the content on the display?

The split screen views are populated with content chosen and uploaded by you. The easy-to-navigate software makes it simple for you to control patient information, news, text, color schemes, ad space and more.

Can video be used on the split side of the screen?

DisplayRx™ can display web based video.

Does DisplayRx™ interface with other pharmacy management systems? Is an interface required?

DisplayRx™ has interfaces with key vendors in the market (see partner tab). We are happy to work with your vendor to set up an interface. DisplayRx™ is also a standalone system and can be used without an interface.

Who provides and installs the hardware?

We recommend that you purchase all hardware and have it professionally installed. However, we do offer a hardware package and will arrange for a

professional installer in your area. Pricing for hardware and/or hardware installation is additional and included in the proposal upon your request.

What type of hardware is required?

A dedicated PC with a Microsoft operating system is required. For picture quality purposes, a minimum 32" flat screen HD display is recommended.

How is DisplayRx™ Software installed and how long does it take to implement?

Using remote desktop, we are able to install and configure your system, as well as train your staff, without ever stepping foot into your facility. The entire process is completed and fully supported within 3-5 days.

Is DisplayRx™ software HIPAA compliant?

DisplayRx™ is installed on a standalone PC, does not store, transmit, or have access to protected information. Patients' names are partially masked to insure the highest privacy. We will work with your security or compliancy officer to ensure HIPAA requirements are being met when using DisplayRx™ software.

Can DisplayRx™ software be customized to fit our facility needs?

Yes! Suncrest Software builds custom software. We are able to listen to your needs and create what works for you.
